TITLE : ADDRESSING CIRCUIT

ABSTRACT : PURPOSE: To expand an address space to be accessed by writing data on a data bus in an address register connected to the data bus and using the data as an address of a device to be accessed.

CONSTITUTION: In case of accessing a memory 2 from a CPU1, a memory address to be accessed is written in address registers H6, L7 set up by an address decoder 8 as data from the data bus 4 prior to the memory access. When the CPU1 outputs an active signal from the data bus 4, the data stored in the registers H6, L7 are transferred to the memory 2 as the address data of the memory 2 and data are transmitted/received between the memory 2 and the CPU1 in accordance with a signal from a control bus 5.
